

## Aluminum Flight

---

---

### Aluminium Flights

Environmentally friendly. The Aluminum Flight from Hitachi Maxco is the easiest flight to install as it eliminates drilling or notching and does not require filler blocks. Available in two styles, Regular (perfect for tank widths up to 24 ft) and Heavy Duty for tank widths of up to 40 ft! An optional neoprene extrusion slides into the slotted track for use as a squeegee and with just 6 locking plates to mount the extrusion installation is done in just minutes.

The Aluminum Flight is for use with non-metallic or metallic chains. Perfect for high load collectors or where grit is a problem.

Extruded T5 - 6063 Aluminum

Patented Attachment Method Eliminates Drilling, Notching Flights

Simple to Install / Adjust

Environmentally Friendly - Recyclable

Lightweight - 2.36 Lbs per ft
