

Cast Nylon Headshaft Bearing

Cast Nylon Headshaft Bearing

Featuring a Cast Nylon body with oil filled nylon bearing inserts. Self-aligning, split design allows for bearing replacement without removing shaft. Metallic shaft does not come into direct contact with the bearing material as a thick sleeve of non-metallic material is mounted on shaft ends, extending service life by providing low friction contact surfaces between shaft and bearing.

Available from 1-15/16" bore to 4-7/16" bore. Contact Hitachi Maxco for additional details or sizes.

- Cast Nylon Body
- UHMW Shaft Sleeve
- Oil Filled Nylon Bearing
- Simple to Install
- Zero Lubrication Required
- Highly Wear Resistant
